R E P O R T

of the

MEDICAL OFFICER OF HEALTH

FOR THE URBAN DISTRICT OF BRIXHAM FOR 1949.

Mr. Chairman, Ladies and Gentlemen,

I have the honour to present my Annual Report for the year 1949.

The Birth Rate at 14.16 per thousand population is very little less than last year (14.66)

The Registrar-General has again resumed the practice of providing a Comparative Factor for the Death Rate, so that the latter can be standardised according to the Sex and age-grouping of the population of a District to make the Rate strictly comparable with the Rate in all other areas according to their sex and age-groups proportions. This gives a Standardised Death Rate for Brixham of 12.21 per thousand population.

There were few cases of infectious disease: Measles caused 11 cases, and Poliomyelitis 2, despite a greater prevalence of the latter in the country generally.

Diphtheria Immunisation was completed in 125 infants under 4 years of age, and reinforcing protective doses given to 103 older children.

No action was required under Section 47 of the National Assistance Act of 1948.

I have the honour to be,
Your obedient Servant,

A. Dick,
Medical Officer of Health.
